

Perfect fit[®] frame

For Roller, Venetian and Pleated Blinds

The unique design of Perfect fit enables the window blind to fit neatly into stylish frame which moves together with windows or doors when they are opened and closed, providing a combination of shading and ventilation. They can be fitted into most upvc windows including tilt and turn style and skylight windows.

Perfect Fit Frame Benefits

- Bracket clip into the glazing beads, no drilling into the windows or doors is required.
- Significantly improves U-values for winter heat retention as it creates a trapped layer of air.
- Glare control prevents excess direct light at the periphery of the fabric.
- Reduces light penetration at the edges for improved dim out compared to free hanging blinds

Fits into window frame.

Perfect Fit window blinds are available in three styles; roller, pleated and as venetian blinds
