

Duostore Free standing awning

In larger domestic gardens Duostore will shade and protect the barbecue area or be a quiet relaxation area away from the house. In restaurants it provides flexibility to shade outside spaces.

The Duostore consists of a galvanised steel frame, on each side of which a Hallmark folding arm awning is fastened with stainless steel bolts. The cover board and end cheeks complete the frame to make an aesthetically pleasing unit. The Duostore can be placed on the terrace in different ways, self supporting using a stand with a wide base or using a central support fixed into concrete or solid ground.

Operation

The standard Duostore is equipped with a gearbox mechanism on each side operated by a cranked rod. Alternatively, it can also be operated by a remote controlled electric motor. By using remote control, instead of a switch mounted on the frame, you avoid any unauthorised persons from being able to operate the awnings.

Standard dimensions

Projections	2 x 1.5m 2 x 2m 2 x 2.5m 2 x 3m
Widths	3.6m 4.8m 6m
Height	2.6m

A colourful structure

For both the fabrics and the frame there are a wide range of colour choices, so that the Duostore can be perfectly co-ordinated with your home decor or precisely matched with your corporate colour scheme. The standard Duostore frame is supplied in white or brown, but most RAL colours are available.

Fabric

The acrylic fabrics are rot, mildew resistant and dirt repellent. You have a choice ranging from solid colours, to wide block striping and also decorative striping. An optional valence is available.
